Project Management Overview :-

A sprint called Iteration 1 is created. The project has 21 issues or user stories in the backlog.

7 core user stories, 1 user authentication and 2 spikes are selected for the Sprint 1.

User stories are assigned to the respective developers. Certain user stories will involve more than one developer to collaborate and work on it. The users can create multiple individual tasks for a user story. But the total estimated story points for the task cannot exceed the user story.

Post development and QA Release, the QA engineers can create Bugs or defects and tag it to the respective developer or team lead.

The sprint is going to be for 3 weeks from 27 Feb 2024 till 19 Mar 2024.

There will be a deliverable at the end of the sprint 1. Post every sprint there will be sprint retrospective calls to understand what went well and what did not go well.

Story points estimation scale used: -

Story point	Amount of effort required	Amount of time required	Task complexity	Task risk or uncertainty
1	Minimum effort	A few minutes	Little complexity	
2	Minimum effort	A few hours	Little complexity	
3	Mild effort	A day	Low complexity	
5	Moderate effort	A few days	Medium complexity	
8	Severe effort	A week	Medium complexity	
13	Maximum effort	A month	High complexity	

Referred from - <https://www.7pace.com/blog/story-points>

Priorities can be one of the below: -

Priority field settings

Field name

Priority

Field type

☒ Single select

Options

Low

Medium

High

Add option...

Each User story can have a status from one of the options below: -

Options

::	Backlog	This item hasn't been started
::	To Do	This is ready to be picked up
::	In progress	This is actively being worked on
::	In review	This item is in review
::	Quality Assurance	Testing of features by a dedicated QA
::	Done	This has been completed

Multi Event Creation #20

 Open regostar opened this issue yesterday · 0 comments

regostar commented yesterday · edited by Sony8179

As a user who may be an event manager, I want to be able to create multiple events that may happen in the same time frame. I should be able to switch between events and work on them seamlessly.

Acceptance Criteria: -

1. Capability to create and manage separate events which may have overlapping schedules.
2. Tools to compare and resolve scheduling conflicts between different events.

(2nd acceptance criteria need further discussion)

User dashboard #19

 Open Govind-Asawa opened this issue 3 days ago · 0 comments

Govind-Asawa commented 3 days ago · edited by regostar

As a user I want a dashboard that shows all, in-progress and upcoming events so that I can quickly navigate to appropriate event tasks to review/change as needed.

Acceptance criteria

1. There should be a clear separation between the all, in-progress and upcoming events, maybe by using separate tabs
2. Every individual event should be clickable and should take the user to event view page

Vendor Recommendations #9

 Open regostar opened this issue 3 days ago · 0 comments

regostar commented 3 days ago · edited

As a user, I want to receive vendor recommendations for tasks that require external services, such as venue bookings or catering, to streamline the vendor selection process.

Acceptance Criteria

1. When requesting vendor information, appropriate vendor details such as email address, mobile number, etc. are shared.
2. Must consider users' current location if possible.

Story Points = 8

Complexities - LLM should have access to the internet

Notification Module - User is notified of upcoming event and it's task based on their opt-in status #7

 Open regostar opened this issue 3 days ago · 1 comment

regostar commented 3 days ago · edited

As a user of Eventique, I want a notification system implemented within the application, so that I can receive updates on my current tasks, upcoming agenda items, and timely reminders via my preferred communication methods. This will assist the user in staying organized and on track with event planning responsibilities.

Acceptance Criteria:-

1. Opt-in Feature: Users must have the option to opt-in to the notification system to start receiving updates.
2. Notification Content: Notifications should include information on current tasks, upcoming agenda items, and reminders relevant to the user's event planning activities.
3. Primary Notification Method: The initial phase of the notification system will use email as the primary method of communication.
4. Future Integration: The system should be designed with the capability to integrate SMS and WhatsApp notifications in future updates, allowing users more flexibility in how they receive notifications.
5. Message can be customized by the user otherwise automatically generated by the AI
6. The notification system should comply with data privacy regulations and ensure the security of user information.

Exporting tasks to an external calendar #8

Edit New issue

Govind-Asawa opened this issue 3 days ago · 0 comments

Govind-Asawa commented 3 days ago · edited by regostar

As a user, I want to have the ability to add individual or all tasks generated for an event to some external calendar such as Google or Outlook, so that I can see tasks related to events along with my other tasks if any.

Acceptance Criteria

1. Every task generated by the Gen AI model has an explicit option to be exported to an external calendar
2. An export all-tasks option

Story Points = 8

ChatGPT/LLM to the external calendar directly.
There should also be an option to export the event .ics file

Sending out Invitations #10

Edit New issue

regostar opened this issue 3 days ago · 0 comments

regostar commented 3 days ago · edited

As a user, I want Eventique to simplify the process of sending invitations to all the invitees, ensuring that no one is left out and RSVPs are easily managed.

Email contents must be generated by the LLM. User should be given the option to edit and add their own content as well.

Acceptance Criteria

1. Mass invitation emails sent out to all event invitees, and effectively collect their responses, streamlining the invitation process and facilitating efficient communication with invitees.

Story Points = 13

Complexity:-

Text editing features and model creation

User Authentication and Admin - (Tech. Support) Dashboard #5

Open regostar opened this issue 3 days ago · 1 comment

regostar commented 3 days ago · edited

As a user, I want to be able to sign up and log in, so that I will be able to access the tool.

The user enters their username, email, First Name, last name, phone(optional), and password. There must be a verification email sent to the user.

As an admin, I want to log in and be able to manage the entire user and have admin access to the data stored. The admin is a technical support specialist who will assist users when they face issues.

Suggestions -
Use Django which also allows admin access.

Estimate:-
Story points = 3

Definition of Done:-

- Frontend and backend developed which enables users to log in and sign up.
- Admin is able to log in and see the admin dashboard with access to all the event data of different users.

Social Media Integration #22

Open regostar opened this issue yesterday · 0 comments

regostar commented yesterday · edited by Sony8179

As an event Host, I want to share the event with my friends on social media (like Facebook, Instagram, X-Twitter, etc). An itinerary of the event with an image generated can be shared on social media. This is so that my social media connections can know that there is an event happening along with a link to express their interest to join the event is optional.

Acceptance Criteria:-

- Generate a social media sharable itinerary.
- Integrate with Facebook, Twitter, WhatsApp and LinkedIn.
- Generate an invite link to show the viewers more details.
- Allow viewers to register for the event.
- Generate an image based on the event planned and user prompt. (optional)

Budget Estimator and Optimizer #17

Open

regostar opened this issue 3 days ago · 0 comments

regostar commented 3 days ago · edited

As a user, I need a feature that enables me to input event requirements and preferences, allowing the system to generate accurate cost estimates. Additionally, I require functionality to optimize expenses by suggesting cost-effective vendors and services while maintaining event quality.

Acceptance Criteria

1. The system must accurately calculate cost estimates based on the input parameters provided by the user, considering factors such as vendor fees, rental costs, catering expenses, and other relevant event expenditures.

2. Users should have the option to adjust input parameters and receive updated cost estimates in real-time, providing flexibility in budget planning.

3. The user should be shown (UI) a summary of the approximate budget costs at each task level in an event.

SPIKES (part of sprint 1):-

1. <https://github.com/regostar/eventique/issues/1>

Spike - Research and decide the right LLM to use in Eventique #1

Open

regostar/eventique Private

regostar opened this issue 5 days ago

To evaluate different Large Language Models for potential integration into Eventique. The evaluation criteria will prioritize cost (specifically the availability of free API credits), ease of usability (including the complexity of API integration)

Parameters which we consider in the order specified -

1. Cost - Free credits for API access

2. Ease of Usability - API integration complexity

(We do not consider speed at this stage in the development.)

Various LLM's to explore :-

LLAMA,

ChatGPT and it's multiple engines

Nvidea - LLMs

any other in the market

Expected Outcome:-

A comparison report outlining the advantages and limitations of each considered LLM.

A recommendation for the most suitable LLM for Eventique, balancing cost, usability, and speed, to facilitate informed decision-making for the integration process.

Spike - Identify the right Calendar app and perform a POC #3

regostar/eventique

Private

regostar opened this issue 5 days ago

Edits

As a **user**, I want to **visualize** the created schedules for my event. This is created **so that** the user can easily manage, update and view their created schedules. This task is not to integrate but to choose the best calendar app suited for our business purpose.

Perform research on which calendar app to use, whether we design our own or display or use an existing calendar application.

Calendar apps to look out for -

- Google
- Outlook
- any other
- custom

Parameters :-

- Ease of integration and usability
- Cost
- LLM should be easily able to create, update and delete an event

Story Points = 3
(Need to evaluate multiple calendars and their compatibility this may take a day's effort)

Definition of Done:-
A decision whether the calendar app is going to be built ground up or we use an existing calendar to integrate.

- If we use an existing calendar and integrate it with our application, then a POC (proof of concept) is required for its integration with an LLM.
- If we decide to build our own calendar app ground up, then a proof of concept must be developed and its integration with LLM must be shown

I am hosting a small gettogether of 5 to 10 people at home , I want a halloween themed party plan

That sounds like a lot of fun! Here's a Halloween-themed party plan for your small get-together:

Invitations:

1. Create spooky invitations with Halloween motifs like ghosts, pumpkins, or witches.
2. Encourage guests to come in costume and specify if there's a theme (e.g., classic monsters, movie characters, or spooky creatures).

Decorations:

3. **Entrance:**

- Set the mood right at the entrance with fake spider webs, hanging bats, and a "Welcome to the Haunted House" sign.

4. **Indoor Decor:**

- Dim the lights and use candles or fairy lights to create a mysterious ambiance.
- Place jack-o'-lanterns on tables or around the room.
- Scatter fake spiders, skeletons, and other creepy decorations.
- Hang spooky banners or garlands.
